ABSTRACT:

The present invention relates to systems and methods for locating references related to a target intellectual property item in one or more accessible information storage systems. In accordance with the present invention, one or more search terms associated with the target item are received. Where possible, the received terms are expanded to include variations of interest. The expanded search terms are used to conduct searches in the accessible information storage systems. The search results are accumulated in a search result set. A report based upon the search result set is generated and transmitted to an output device. A typical system implementing the present invention includes a data store in communication with one or more processors.

CROSS-REFERENCE TO RELATED PATENT APPLICATION

[0001] This application claims the benefit, pursuant to 35 U.S.C. .sctn.119(e), of applicants' provisional U.S. Patent Applications Serial No. 60/238,566, filed Oct. 6, 2000, entitled "SYSTEM AND METHOD FOR AUTOMATICALLY SEARCHING AND ANALYZING INTELLECTUAL PROPERTY-RELATED MATERIALS", which application is hereby incorporated by this reference in its entirety for all purposes.

COPYRIGHT 2003 DERWENT INFORMATION LTD

TITLE: Patent information providing system has user terminal connected to patent
data server to read and display classified patent list from database based on
selected preset search speciality

PATENT-ASSIGNEE: TOSHIBA ENG KK (TOSB)

PRIORITY-DATA: 2001JP-0141805 (May 11, 2001)

PATENT-FAMILY:

INT-CL (IPC): G06 F 17/30; G06 F 17/60

ABSTRACTED-PUB-NO: JP2002342447A
BASIC-ABSTRACT:

NOVELTY - A search speciality list, a classified patent list and a patent gazette
evaluation entry list are generated with respect to patent data. A user terminal
connected to a patent data server reads and displays patent list classified with
respect to search speciality, when a predetermined search speciality is selected
from the displayed search speciality list.

USE - Patent information providing system.

ADVANTAGE - Ensures confidentiality by allowing only the specific patent information
retrieval person to search patent data. Performs neither the duplication setup of a
search result nor the recycling of the retrieval result. Enables to access patent
database at any time, as patent gazette for every speciality is collected and
regulated.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of patent information
providing system. (Drawing includes non-English language text).
